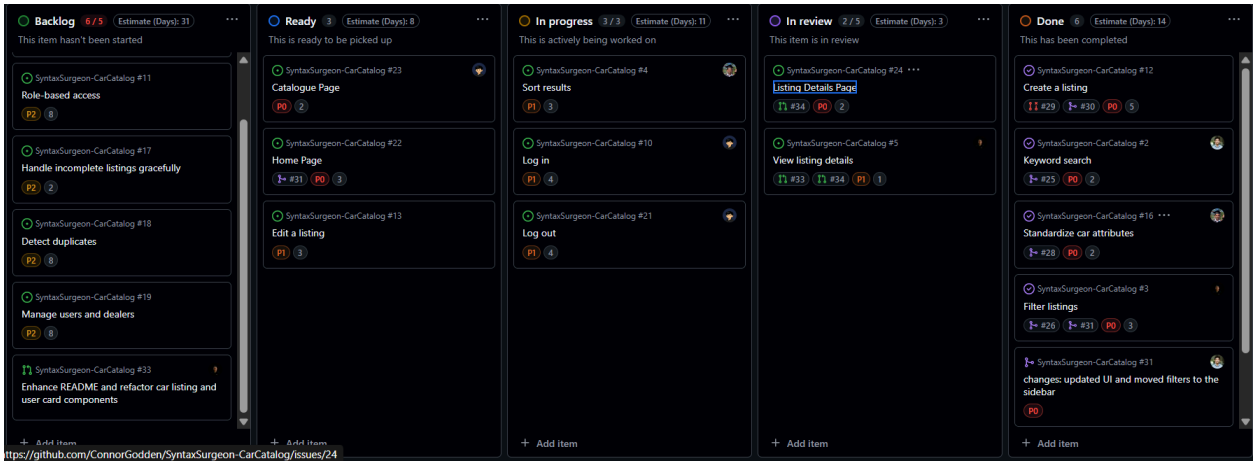
Repository & Project Board Review

GitHub Board

Most of iteration 1, with the P0 tag, has been completed. Listing Details is in review since it still correlates with other tasks that will require it to be reviewed again. Iteration 2, P1 label, has been started.



Committed Code

The main branch commits consist of mainly merge requests. However the commits on each branch contain commits of the code changes. Such as on this branch (branch titled dataset-and-cleaning)

Commits on Mar 4, 2026

Updated data parsing ConnorGodden committed last week		f75c70a
Added image string for the image box ConnorGodden committed last week		442e875
feat: add cleaned car data and types, remove raw csv nehalhuda committed last week		b034137
Fix CI: add missing npm test script matt-serrano committed last week		01dbf64
Add car image support with placeholder matt-serrano committed last week		02e90ec
Merge pull request #25 from ConnorGodden/feat-keyword-search ConnorGodden authored last week	Verified	cd3e634

Commits on Mar 3, 2026

feat: implemented a working keyword searchbar VinceKLW committed last week		d97da7c

README

This is what our readme document looks like, containing steps on how to run the application on your own machine, while also providing a link to a live and consistent updated link.

This is a Next.js project bootstrapped with `create-next-app`.

How to run it

In order to run the app you must have `TypeScript` installed at minimum. This will also include `npm`.

1. Clone the repo. This can be accomplished by opening a command prompt, navigating to a directory for the app. In the terminal run:

`git clone https://github.com/ConnorGodden/SyntaxSurgeon-CarCatalog.git CarCatalog`

2. Navigate to the code, `cd CarCatalog`

3. In the main directory you should see an `app` folder along with `.yaml` and `.json` files. From here you can start the server.

```
npm run dev
# or
yarn dev
# or
pnpm dev
# or
bun dev
```

4. Open http://localhost:3000 with your browser to see the result.

This project uses `next/font` to automatically optimize and load Geist, a new font family for Vercel.

Live Link

The app is deployed to the Vercel Platform from the creators of Next.js. The link to the live application is cars.connor12858.ca.
